

## GLOSSARY

### Single vision

Lenses made to your

- **Near** (close up reading),
- **Intermediate** (middle distance i.e VDU) or
- **Distance** (far vision)

### Bifocals

Bifocal lens include **Reading** and **distance** prescriptions in the same lens.

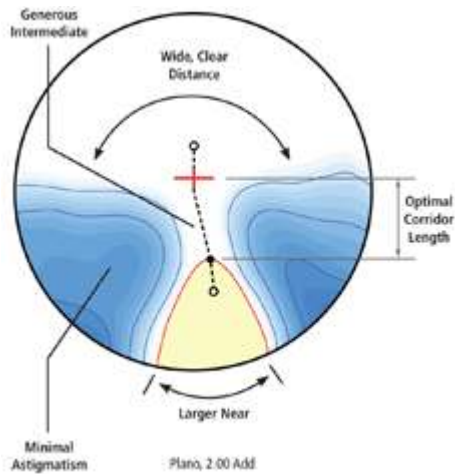

- Wear the same glasses for reading, watching TV, driving.
- Does not have a middle distance viewing range
- No need for two pairs of glasses
- Choice of segments from round/D-segments and executive
- Premium Bifocals - choice of larger round segments, D segments or full width

# Varifocals

Look just like ordinary lenses, but provide a smooth transition from near vision to far and distances in between.

- No visible bifocal-type lines
- Free hard-wearing scratch-resistant treatment

## Standard varifocal

Easy to adapt to and fit deeper frames. They have clear vision at distance, intermediate and close-up, but there is some soft focus at the edge of your vision, so we have scored them:

Distance vision: ★★★

Midrange vision: ★★

Near vision: ★★★

### Elite Tailor-Made varifocal

Our highest quality lens. Latest technology called freeform. Freeform technology use front and rear aspherical surfaces combined gives excellent clarity gives excellent clarity and our widest field of clear vision at distance, intermediate and near. They are easiest to adapt to and fit all frames.

Distance vision: ★★★★★★  
 Midrange vision: ★★★★★★  
 Near vision: ★★★★★★

### Mar (Multi-reflection coating)

Anti-reflection and scratch-resistant coating.

- Makes your eyes more visible
- Improves the appearance of your glasses
- Reduces glare from computers and car headlights
